

One - Handed Operation

Modern Incontinence Waste Management. Easy, Hygienic, Cost Saving.

The Friulmed Hygiene FC Vacuum System offers an innovative and effective solution for storage, transport, and disposal of incontinence waste. It effectively seals and isolates incontinence waste resulting in an odour free environment for residents, staff, and visitors. The incontinence vacuum system leads to a significant reduction in the incontinence waste volume and in turn a minimum of 60% in costs for waste disposal.

Unsealed and exposed incontinence waste is a constant danger to nursing staff through contamination by germs and drug resistant pathogens. Not only is it costly to dispose of, but it also presents a hazard to nursing staff. The unique hygiene filter of the Friulmed incontinence vacuum system effectively prevents the escape of pathogens and germs. The living and working environment remain unpolluted and sterile, and most importantly, staff and residents are protected.

Friulmed's Health Benefits At A Glance:

- + Significantly improves hygienic standards within the facility for patients, staff and visitors
- + Incontinence waste storage and handling without odour and risk of infection
- + High cost saving potential through a reduction of disposal and handling costs
- + Simplified storage and transportation of incontinence products
- + Minimizes the risk of infection by incontinence waste
- + Best service from a single source
- + Design fits standard waste collection trolleys
